DRYZONE the fast, clean, effective treatment for rising damp...

The Symptoms...

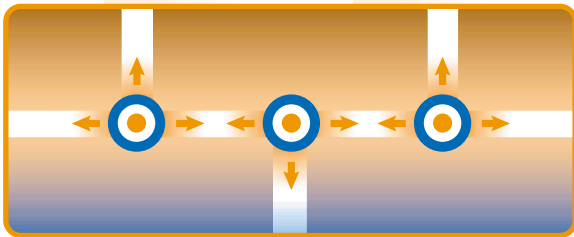

Flaking paint, peeling wallpaper, a "musty" odour, and timber decay are among the most common symptoms of rising damp. Failure to treat the problem properly can result in a house that is unpleasant to live in and difficult to sell, so it is important to choose an effective method of treatment.

The Cover-up...

It can be tempting to try and cover up any damp patches with a special paint or coating in the hope that the problem will go away. However, the dampness will often find a way round such coatings and reappear at a later date. Only by preventing the dampness from rising up the wall can the rising damp be properly controlled.

The Dryzone System...

DRYZONE is a special damp-proofing cream that is introduced along the mortar course at regular intervals by injecting it into pre-drilled holes. The Dryzone then diffuses before curing to form a continuous water-repellent barrier. This prevents the damp from rising up the wall:

DRYZONE's fast, clean, effective application by experienced professionals

Since the 1950s, liquid chemical injection systems, which work in a similar way, have been used with a high degree of success. However, from the householders point of view, Dryzone has a number of important advantages over these systems:

FAST • Dryzone can be injected 2 - 3 times faster than ordinary liquid injection fluids. Treatment can therefore be completed earlier, minimising disruption to the householder.

CLEAN • Dryzone is not injected under pressure. The risk of fluid leaking into neighbouring rooms or properties and causing damage is therefore virtually eliminated. Dryzone does not contain any hydrocarbon solvents, so has very little smell.

EFFECTIVE • After extensive laboratory and field testing, Dryzone has been approved by the British Board of Agrément (BBA). The BBA is a Government-partnered testing organisation that has been providing authoritative and independent information on building products for over 30 years.

Not all rising damp treatments are BBA approved. So remember to ask your contractor whether they are using a BBA approved system.

For further details, the BBA can be contacted on 01923 665300, or visit their website at www.bbacerts.co.uk

DRYZONE costs more for your contractor to buy than ordinary liquid injection fluids. However, because it can be installed much more quickly, the benefit of a less disruptive treatment can be offered to you at a competitive price.

Your Guarantee...

The Dryzone system is recognised by both the Guarantee Protection Trust (GPT) and the Property Guarantee Administration (PGA) as an acceptable method of rising damp treatment.

Ask your contractor about the GPT and PGA insurance-backed guarantee schemes, or call one of the following numbers.

Property Guarantee Administration: 0870 607 1610

Guarantee Protection Trust: 01494 447 049
